

SERVICE

## BUILDING PERFORMANCE AND SUSTAINABILITY

### TEAM AND SERVICES OVERVIEW

Pinchin's Building Performance and Sustainability Team understands the pressures associated with targeting Environmental Social Governance (ESG), sustainability, emission reduction goals, as well as establishing sustainable and environmental practices. Our team of consultants have experience supporting all aspects of sustainability from establishing goals to energy audits and certification consulting.

With sustainability being an interdisciplinary field, our Building Performance and Sustainability experts are experienced in utilizing our inhouse specialties including building envelope, mechanical design, indoor environmental quality, and hazardous material testing.

### KEY SERVICE OFFERINGS

**Certification Consulting** - Support client in reaching industry recognized certifications including LEED, BOMA, WELL, Fitwel and Rick Hansen.

**Net Zero** - Study and model energy consumption within a building (or portfolio of buildings) and propose measures on how to reduce energy and greenhouse gas (GHG) emissions. Existing buildings are audited based on ASHRAE standard (ASHRAE Level 1, 2, or 3).

**Climate Resilience** - Analyze how future weather impacts building performance and recommend design guidance. Analysis process follows The Public Infrastructure Engineering Vulnerability Committee (PIEVC) protocol.

**ESG Reporting** - Support client in formally reporting to stakeholders their sustainability efforts, and verifying accuracy of data.
